

Phase 6 Project

Testing Phase

Phase 6: Project API Testing

Focuses on running the backend server and verifying all REST API endpoints using Postman or Thunder Client. It validates request payloads, JWT Bearer authorization, HTTP status codes (200 OK, 201 Created), and JSON responses across user registration, login, manual blog creation/fetching, AI blog generation, and AI content summarization.

User Registration:

HTTP Method: POST

Endpoint: /api/auth/register

User Login:

HTTP Method: POST

Endpoint: /api/auth/login

Create Blog:

HTTP Method: POST

Endpoint: /api/materials/upload

Fetch Blogs:

HTTP Method: POST

Endpoint: /api/materials/:id/summarize

Generate AI Blog:

HTTP Method: POST

Endpoint: /api/ai/flashcards

Summarize Blogs:

HTTP Method: POST

Endpoint: /api/ai/quiz

HTTP Method: POST

Endpoint: /api/ai/study-plan

2   "studyPlan": "Here is a personalized 7-day study plan designed to prepare you for your
backend development exam, based on the provided Node.js study material. Each day is
structured for 2 hours of focused study.\n\n---\n\n## **Student Goal:** Prepare for
Backend Development Exam\n\n**Available Study Time:** 2 hours per day\n\n**Focus:** Node.js
Fundamentals, Architecture, Ecosystem, and Key Modules\n\n---\n\n## **Day 1: Node.js
Fundamentals (2 hours)**\n\n*   **Hour 1: Introduction & Core Concepts**\n\n    *   **Read:** \"Node.js Introduction\" section.\n    *   **Understand:** What Node.js is
(runtime, V8 engine, server-side JavaScript).\n    *   **Grasp:** The concept of
\"single-threaded, non-blocking I/O model\" and why it's efficient.\n    *   **List &
Briefly Explain:** The \"Features of Node.js\" (Event-Driven, Non-Blocking I/O, npm,
etc.).\n\n    *   **Hour 2: Architecture & Advantages/Limitations**\n\n    *   **Read:**
\"Architecture\" section, focusing on the \"Event Loop Architecture.\"\n\n    *   **Activity:** Draw a simple diagram of the Event Loop flow (Client Request -> Event
Queue -> Event Loop -> Worker Threads -> Response). This helps visualize the process.
\n    *   **Summarize:** \"Advantages\" and \"Limitations\" of Node.js. Pay attention to
why it's not ideal for CPU-intensive tasks.\n    *   **Review:** Key terms from today:
V8 Engine, Event Loop, Non-Blocking I/O, Single-threaded.\n\n\n## **Day 2: Modules & npm
```
